

## The Leader in Tablet Mounting

MobileDemand's variety of creative mounting solutions have increased productivity for frontline workers in mobile industries everywhere. Working with clients we determine the correct mounting strategy for their specific tablets and needs to ensure the highest level of business continuity by reducing critical failures and costly down time.

### FORKLIFT

Heavy duty powered and non powered forklift mounting solutions are engineered to hold the tablet securely in place while withstanding the continuous strain of heavy vibrations and the rigors of the road or warehouse floor. Powered docks wire directly to the on-board battery and are equipped with multiple I/O ports, allowing the attachment of additional devices such as scanners and antennas, providing continuous operation throughout the day.

### FIXED

The industry's most cost effective and versatile mounting solution is MobileDemand's stationary mount kit. Our creative engineers designed and patented the Quick Release Snap Mount System which allows tablets to be securely mounted one minute and on-the-go the next. All made possible by an ingenious snap plate that comes standard on every tablet and case. Mount to desks, walls, counter tops, carts, tripods and so much more.

### VEHICLE

Bolt-on and no drill mounting options available with our patented quick release snap mount system with optional keyboard support. Universal fit accommodates a variety of vehicles and applications including law enforcement, ambulance, public safety, field service, food and beverage distribution and more.

### MAGNETIC

This no drill option is perfect for those needing a quick mounting solution when bolt-on is not possible. Our innovative magnetic mount is designed with four extremely powerful rare earth magnets that provide a combined pull force of 122 lbs.!! Securely mount to metal beams, cabinets, walls, benches, machinery and any other ferromagnetic metal surfaces.

## BENEFITS TO PROPER MOUNTING

Whatever the issue, down time has a negative impact on any company. Major factors that contribute to failures are improper mounting, installation and the use of 3rd party mounts not made for the device being deployed. Pairing the tablet with the correct mount is a critical step to maintaining consistent WiFi and Bluetooth connectivity and avoiding disruptions to productivity.

### WAREHOUSING POWERED FORKLIFT MOUNT DOCK

The forklift is the work horse of any warehouse, distribution center, or packaging company. High low, pallet jack and forklift vehicles are focused on efficiently moving inventory and push the daily limits of any device. We have designed and tested our rugged mounts to provide a precision fit while offering a rich assortment of I/O ports to support scanners and other peripherals. All docks and holders may accommodate direct power solutions from the vehicle to the tablet based on specific voltage of the vehicle.

### EMERGENCY VEHICLE DASH MOUNT

Tablet mounting with mobility in mind is essential for first responders. Whether attached to the center console or dash of an ambulance, fire engine or police cruiser, interfacing with GPS maps and Cellular data to guide the team to their destination is mission critical. The snap mount provides the ability to easily remove the tablet while preserving connection to doctors or headquarters while on site. Additional mounts can be attached to walls so EMTs and other personnel can maintain vital communication during transport.

### FIXED MOUNT WALLS, COUNTERS AND MORE

Fixed mounts using a VESA plate or a mobile, no drill magnetic mount allows tablets to be positioned virtually anywhere. Manufacturing utilizes magnetic mounts by affixing directly to machines to manage cycle counts and controls. Healthcare may employ a snap mount on the exam room wall or admissions area to digitize the check-in process. Restaurant or retail settings may utilize a counter top with a tablet equipped with MSR, the quick release snap mount instantly converts the tablet into a convenient mobile Point of Sale system.

### NO DRILL VEHICLE MOUNT OPTIONAL KEYBOARD SUPPORT

Computers mounted in police cars, trucks, and utility vehicles traditionally required large, heavy mounts that took up much of the passenger seat area. They require intricate and sometimes invasive installation and are very expensive. A no drill floor mount, used in conjunction with MobileDemand's patented quick release snap mount system make those bulky installs a thing of the past, freeing up space and saving time. Add an optional keyboard support for additional productivity for processes such as email and remote communication.

## THE SIMPLE GENIUS OF OUR PATENTED QUICK RELEASE SNAP MOUNT SYSTEM

Providing mobile industries with rugged, reliable technology is what inspired the genesis of MobileDemand. But that was only part of the equation. Realizing a growing number of industries needed the ability to safely and securely mount their devices soon became a driving force to what now sets us apart from others in the industry.

We immediately went to work and patented our extremely versatile Quick Release Snap Mount System, we've been expanding our expertise ever since.

When it comes to mounting, we *are* the experts.

#### A - Snap Plate

Every MobileDemand xTablet is securely affixed with our universal snap plate, allowing users to custom configure a mounting solution best designed to fit their exact needs.

#### B - Snap Rail

Engineered to slide and snap securely onto the snap plate receiver. Four hole pattern accommodates universal RAM mount products, allowing a vast array of mounting possibilities.

#### C - Snap Release

Quickly transition tablet from mounted to mobile applications and vice versa with a simple press of the snap release. Anti-theft lock and key design also available for those needing a safe and secure solution.

#### D - RAM Compatible

Designed to work with the extremely versatile RAM components provides virtually limitless rugged mounting solutions in any environment.
